Fluids, Electrolytes and Acid-Base Balance Todd A. Nickloes, DO, FACOS Assistant Professor of Surgery  
Department of Surgery Division of Trauma/Critical Care

### **Fluids, Electrolytes and Acid-Base Balance**

Acid-base homeostasis is the homeostatic regulation of the pH of the body's extracellular fluid (ECF). The proper balance between the acids and bases (i.e. the pH) in the ECF is crucial for the normal physiology of the body, and cellular metabolism. The pH of the intracellular fluid and the extracellular fluid need to be maintained at a constant level.. Many extracellular proteins such as ...

A conjugate acid, within the Brønsted-Lowry acid-base theory, is a species formed by the reception of a proton (H<sup>+</sup>) by a base—in other words, it is a base with a hydrogen ion added to it. On the other hand, a conjugate base is what is left over after an acid has donated a proton during a chemical reaction. Hence, a conjugate base is a species formed by the removal of a proton from an acid.

Abstract Although short (up to 3 days) exposure to major shifts in macronutrient intake appears to alter acid-base status, the effects of sustained (>1 week) interventions in elite athletes has not been determined.

Electrolytes are minerals that are found in body tissues and blood in the form of dissolved salts. As electrically charged particles, electrolytes help move nutrients into and wastes out of the body's cells, maintain a healthy water balance, and help stabilize the body's acid/base level. The electrolyte panel measures the blood levels of the main electrolytes in the body: sodium (Na<sup>+</sup> ...

All serum potassium analyses are based on central laboratory values; 3 patients (2 with mild hyperkalemia [potassium concentration >5.0 to 5.5 mEq/L] and 1 with moderate hyperkalemia [potassium concentration >5.5 to <6.0 mEq/L]) did not have a central laboratory serum potassium value at baseline and therefore are not included in the analysis at this time point.
