In statistical modeling, regression analysis is a set of statistical processes for estimating the relationships among variables. It includes many techniques for modeling and analyzing several variables, when the focus is on the relationship between a dependent variable and one or more independent variables (or 'predictors'). More specifically, regression analysis helps one understand how the ...

In statistics, linear regression is a linear approach to modelling the relationship between a scalar response (or dependent variable) and one or more explanatory variables (or independent variables). The case of one explanatory variable is called simple linear regression. For more than one explanatory variable, the process is called linear regression. ...

Applied Predictive Modeling covers the overall predictive modeling process, beginning with the crucial steps of data preprocessing, data splitting and foundations of model tuning. The text then provides intuitive explanations of numerous common and modern regression and classification techniques, always with an emphasis on illustrating and solving real data problems.

The term parameter estimation refers to the process of using sample data (in reliability engineering, usually times-to-failure or success data) to estimate the parameters of the selected distribution. Several parameter estimation methods are available. This section presents an overview of the available methods used in life

data analysis.

1.. Introduction In this article we review a particular type of multivariate analysis, namely PLS-regression, which uses the two-block predictive PLS model to model the relationship between two matrices, X and Y. In addition PLSR models the "structure" of X and of Y, which gives richer results than the traditional multiple regression approach. PLSR and similar approaches provide quantitative ...

Hi Ji-A. I used a simple linear regression example in this post for simplicity. As you alluded to, the example in the post has a closed form solution that can be solved easily, so I wouldn't use gradient descent to solve such a simplistic linear regression problem.
