

### **enzyme cut out activity pdf**

Cut DNA 5' G AATTC 3' 3' CTAA G 5' The EcoRI cut sites are not directly across from each other on the DNA molecule. When EcoRI cuts a DNA molecule, it therefore leaves single stranded "tails" on the new ends (see the example just given). This type of end has been called a "sticky end" because it is easy to rejoin it

Enzymes are protein molecules in cells which work as catalysts. Enzymes speed up chemical reactions in the body, but do not get used up in the process.. Almost all biochemical reactions in living things need enzymes. With an enzyme, chemical reactions go much faster than they would without the enzyme. p39. The substances at the start of the reaction are called substrates.

Recently, we discussed herbal blood cleansers and how they work to boost the lymphatic system and actively defend against multiple kinds of cancer in the body. In that article, we mentioned that systemic, proteolytic enzymes also work to clean out the blood, but through entirely different pathways and mechanisms and to entirely different end results.

Superoxide dismutase (SOD, EC 1.15.1.1) is an enzyme that alternately catalyzes the dismutation (or partitioning) of the superoxide ( $O_2^{\cdot -}$ ) radical into either ordinary molecular oxygen ( $O_2$ ) or hydrogen peroxide ( $H_2O_2$ ). Superoxide is produced as a by-product of oxygen metabolism and, if not regulated, causes many types of cell damage. Hydrogen peroxide is also damaging and is degraded by ...

The enzyme-linked immunosorbent assay (ELISA) ( $E^a E^{\cdot} | a E^a z E^{TM} / , / E^{\cdot} i E^{\cdot} E^{\cdot} | a E^a z E^{TM} /$ ) is a commonly used analytical biochemistry assay, first described by Weiland in 1978. The assay uses a solid-phase enzyme immunoassay (EIA) to detect the presence of a ligand (commonly a protein) in a liquid sample using antibodies directed against the protein to be measured.
