estimate field capacity. The work described in this paper was designed to develop a rapid method of determining the field capacity of irrigated soils, in the field, under conditions of crop growth. In addition, comparisons of moisture holding characteristics determined in 26 the laboratory with the field capacity as measured in the field, were made

The methods contained in this manual are considered by the Committee to be the best available at this time. The manual will be revised and new methods will be recommended as the need arises. The Committee attempted to avoid duplicating field and laboratory methods already adequately described for Agency use in Standard Methods
