Climate change is one of the greatest challenges facing humanity today. Its effects are already being felt—from strengthened storms and rising sea levels to changing temperature and weather patterns—and they will only grow worse.

Climate change | UNFPA - United Nations Population Fund

Global warming is a long-term rise in the average temperature of the Earth's climate system, an aspect of climate change shown by temperature measurements and by multiple effects of the warming. The term commonly refers to the mainly human-caused observed warming since pre-industrial times and its projected continuation, though there were also much earlier periods of global warming.

Global dimming is the gradual reduction in the amount of global direct irradiance at the Earth's surface that was observed for several decades after the start of systematic measurements in the 1950s. The effect varies by location, but worldwide it has been estimated to be of the order of a 4% reduction over the three decades from 1960"1990.
