A paratope, also called an antigen-binding site, is a part of an antibody which recognizes and binds to an antigen. It is a small region (of 5 to 10 amino acids [citation needed]) of the antibody's Fv region, part of the fragment antigen-binding (Fab region), and contains parts of the antibody's heavy and light chains. Each arm of the Y shape of an antibody monomer is tipped with a paratope ...

Paratope - Wikipedia

Clonal deletion is the removal through apoptosis of B cells and T cells that have expressed receptors for self before developing into fully immunocompetent lymphocytes. This prevents recognition and destruction of self host cells, making it a type of negative selection or central tolerance. Central tolerance prevents B and T lymphocytes from reacting to self.

Mitogene sind Zellteilungen anregende Proteine.. Immunologie. Mitogene regen Zellteilungen bei B- und T-Zellen an. Während Antigene die B- und T-Zellen nur über spezifisch bindende Rezeptoren aktivieren können (echte Immunantwort), reagieren Mitogene durch Stimulation dieser Zelltypen (keine spezifische Immunantwort). Wegen dieser Fähigkeit werden sie als polyklonale Aktivatoren bezeichnet.

C-reaktivni protein, skraćeno CRP je protein u krvi čovjeka iz obitelji pentraksina. CRP su otkrili Tillett i Francis 1930.g. . CRP je protein s mnogo fizioloških uloga u sklopu imunološkog sustava čovjeka, kao što su npr. vezivanje na fosfokolin izražen na površini mrtvih ili umirućih stanica (oštećenih infekcijom, upalom ili trumom), vezivanje na nuklearne antigene i određene ...

C-reaktivni protein - Wikipedia

Interactions between antigen and antibody. Interaction between antigen and antibody is a bimolecular association and it does not lead to an irreversible chemical alteration in either the antibody or the antigen.

Interactions between antigen and antibody - Wiki

Falsch-positive Antikörper-ELISA-Ergebnisse werden dadurch erzeugt, dass die dem Patienten entnommene Flüssigkeit (z.B. Blutserum) eine Vielzahl von Epitopen auf Antigenen und Antikörpern (Oberflächenproteinen) enthält und einige von diesen Epitopen eine ähnliche ELISA-Reaktion auslösen wie das Epitop des gesuchten Bakteriums (OspC). Man nennt sie "kreuzreagierende Epitope".

Il timo è un organo linfatico primario e il sito di maturazione delle cellule T, i linfociti del sistema immunitario adattativo. Il timo aumenta di dimensioni, dalla nascita in risposta alla stimolazione antigenica postnatale, per poi regredire dopo la pubertà, quando viene in gran parte sostituito da tessuto adiposo. Tuttavia, residuo linfopoiesi T continua per tutta la vita adulta.

(Datum: 9. April 2018) W. Berghoff, Klinische Grundlagen der antibiotischen Behandlung bei Borreliose, 2007 (im Cache) Das Erythema migrans tritt mÄ¶glicherweise erst Wochen oder Monate nach Zeckenstich auf. In solchen Situationen ist es fraglich, ob das Erythema migrans hilft, den Zeitpunkt der Dissemination zu bestimmen.
