Samba is a free software re-implementation of the SMB networking protocol, and was originally developed by Andrew Tridgell. Samba provides file and print services for various Microsoft Windows clients and can integrate with a Microsoft Windows Server domain, either as a Domain Controller (DC) or as a domain member. As of version 4, it supports Active Directory and Microsoft Windows NT domains.

Configuration of a read-only data server that everyone can access is very simple. By default, all shares are read-only, unless set otherwise in the smb.conf file. The example - Reference Documentation Server is the smb.conf file that will do this. Assume that all the reference documents are stored in the directory /export, and the documents are owned by a user other than nobody.
