A two-port network (a kind of four-terminal network or quadripole) is an electrical network or device with two pairs of terminals to connect to external circuits. Two terminals constitute a port if the currents applied to them satisfy the essential requirement known as the port condition: the electric current entering one terminal must equal the current emerging from the other terminal on the ...

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

Experimental setup for the generation of entangled photons. The image shows a laser beam (L) passing through a half-wave plate (λ/2) and a polarizing beam splitter (PBS). The resulting beams pass through wave plates (λ/4) and are detected by photodiodes (D). The setup is used for quantum optics experiments.
