In probability theory and related fields, a stochastic or random process is a mathematical object usually defined as a collection of random variables. Historically, the random variables were associated with or indexed by a set of numbers, usually viewed as points in time, giving the interpretation of a stochastic process representing numerical values of some system randomly changing over time ...

The word stochastic is an adjective in English that describes something that was randomly determined. The word first appeared in English to describe a mathematical object called a stochastic process, but now in mathematics the terms stochastic process and random process are considered interchangeable. The word, with its current definition meaning random, came from German, but it originally ...

One of the first clues that MMR relies on stochastic thermal diffusion to initiate excision came from studies of MSH proteins. The MSH proteins linked to MMR operate as a dimer or heterodimer and recognize mismatched nucleotides (Fig. 1a) , , , . Importantly, in the presence of ATP, all MSH proteins undergo a conformational transition into a sliding clamp that randomly diffused along the ...

Probability > Stochastic Model. What is a Stochastic Model? A stochastic model represents a situation where uncertainty is present. In other words, it's a model for a process that has some kind of randomness.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Description of the non-equilibrium effects in reactive gas mixtures constitutes a grand challenge in physical-chemical gas-dynamics. Such processes are of great interest for the fields such as plasma physics, aerospace engineering, astrophysics, chemical engineering, etc.
