For a table of volumetric heat capacities, see Heat capacity#Table of specific heat capacities.. Volumetric heat capacity (VHC), also termed volume-specific heat capacity, describes the ability of a given volume of a substance to store internal energy while undergoing a given temperature change, but without undergoing a phase transition.It is different from specific heat capacity in that the ...

This chapter discusses the fundamentals of phase behavior of hydrocarbon fluids. The influence of water on the phase behavior and properties of hydrocarbon fluids in most cases is of minor consideration.

The volume-of-fluid (VOF) approach is a mature technique for simulating two-phase flows. However, VOF simulation of phase-change heat transfer is still in its infancy.

$K = p/\epsilon_v$ Here p is the hydrostatic pressure, ϵ_v is the volumetric strain and K is the bulk modulus. In practice, a positive volumetric strain is defined as a decrease in volume.

Thirst is the craving for fluids, resulting in the basic instinct of animals to drink. It is an essential mechanism involved in fluid balance. It arises from a lack of fluids or an increase in the concentration of certain osmolites, such as salt. If the water volume of the body falls below a certain threshold or the osmolite concentration becomes too high, the brain signals thirst.

Introduction Heavy oil is defined as liquid petroleum of less than 20°API gravity or more than 200 cp viscosity at reservoir conditions. No explicit differentiation is made between heavy oil and oil sands (tar sands), although the criteria of less than 12°API gravity and greater than 10,000 cp are sometimes used to define oil sands.
